

# Errata - 3.3.2 / 3.4.0 XSS in devices list template (Community)

There is insufficient escaping on an element in the v\_devices\_collection.php template in Open-Audit Community.

To address this issue, edit line 199 in the file below.

Windows - c:\xampp\open-audit\code\_igniter\application\views\theme-bootstrap\v\_devices\_collection.php

Linux : /usr/local/open-audit/code\_igniter/application/views/theme-tango/v\_devices\_collection.php

In 3.3.2 the line looks as below.

```
        echo '<span class="label label-info">' . $item->name . ' ' . $item->operator . ' ' . urldecode($item->value) . ' <a href="' . $link . '"></a></span> ';
```

In 3.4.0 the line looks as below.

```
        echo '<span class="label label-info">' . htmlentities($item->name) . ' ' . htmlentities($item->operator) . ' ' . urldecode($item->value) . ' <a href="' . $link . '"></a></span> ';
```

To negate the issue, change the line as below.

```
        echo '<span class="label label-info">' . htmlentities($item->name) . ' ' . htmlentities($item->operator) . ' ' . htmlentities(urldecode($item->value)) . ' <a href="' . $link . '"></a></span> ';
```

Apologies for any inconvenience.

This has been addressed for our next release.
