

# opFlow 2.3.1 upgrade instructions

- [Upgrade files](#)
- [Reports \(optional\)](#)
- [Email Reports \(optional, requires reports to be configured\)](#)
- [Troubleshooting](#)

This documentation assumes you are upgrading from 2.2.X and currently have opFlow reports running.

## Upgrade files

1. Backup your existing installation

```
cd /usr/local
cp -r opmantek opmantek_backup_<insert_date>
```

2. Obtain a copy of the tarball, from now on it will be assumed the file is in /tmp
3. Untar

```
cd /usr/local
tar -zxvf /tmp/opFlow-release.tar.gz
```

4. Update config files

```
cd /usr/local/opmantek
./bin/opupdateconfig.pl install/opFlow.nmis conf/opFlow.nmis
./bin/opupdateconfig.pl install/opCommon.nmis conf/opCommon.nmis
```

5. Copy new configuration files into conf/

```
cd /usr/local/opmantek
cp install/EmailReports* conf/
```

6. Fix permissions

```
cd /usr/local/opmantek/bin
./opfixperms.pl
```

7. Restart Daemons

```
service flowd restart
service opflowd restart
```

## Reports (optional)

1. [OPTIONAL] If you want hourly reports to be available immediately after the hour, add their generation to cron

```
crontab -e
0 * * * * /usr/local/opmantek/bin/opFlowReports-hourly.sh
```

2. Daily reports should already be in the cron, if you have added hourly reports above they are not needed but running the script will do no harm

```
crontab -e
0 1 * * * /usr/local/opmantek/bin/opFlowReports-daily.sh
```

## Email Reports (optional, requires reports to be configured)

NOTE: Emailing reports DOES NOT work with auth mode "apache". Authentication must run through opmantek code, all other auth methods work, eg: htpasswd, ldap, etc.

1. Install phantomjs
  - a. Download it from <http://phantomjs.org/>
  - b. Untar it, move it to /usr/local
  - c. create a sym link to /usr/local/phantomjs, eg. In -s phantomjs-1.9.2-linux-x86\_64/ phantomjs
  - d. Open /usr/local/opmantek/conf/opFlow.nmis, make sure this line 'phantomjs\_executable' => '/usr/local/phantomjs/bin/phantomjs' is valid and points to the executable
2. Ensure auth mode is **not** set to apache in nmis8/conf/Config.nmis, 'auth\_method\_1' => , also make sure auth is removed from apache config file 01opmantek.conf, and restart apache if necessary.
3. Configure the email section of conf/opFlow.nmis

```
#the email section needs to be made valid
'email' => {
  'mail_from' => 'open-audit_enterprise@yourdomain.com',
  'mail_password' => 'your_password',
  'mail_server' => 'smtp.yourdomain.com',
  'mail_server_port' => 25,
  'mail_subject_prefix' => '[mymagictag]',
  'mail_use_tls' => 'true',
  'mail_user' => 'your_user_account@your_domain.com'
},

# example Gmail configuration:
'email' => {
  'mail_from' => 'user@gmail.com',
  'mail_password' => 'gmailPassword',
  'mail_server' => 'smtp.gmail.com',
  'mail_server_port' => 587,
  'mail_subject_prefix' => '[Report]',
  'mail_use_tls' => 'true',
  'mail_user' => 'user@gmail.com'
},
```

4. [OPTIONAL] If you would like hourly reports to be emailed, configure the EmailReportsHourly.sh file, then enable it to be run from opFlowReports-hourly.sh

```
vi /usr/local/opmantek/conf/EmailReportsHourly.sh

# set email addresses
# set sites
# copy/paste code blocks for each site if that is how you want them sent out
# create code block for specific reports if you don't want them all sent every time

# then uncomment the line to run the EmailReportsHourly.sh script

vi /usr/local/opmantek/bin/opFlowReports-hourly.sh

## Uncomment the line below to enable emailing hourly reports
## Run Emails
$OMK/conf/EmailReportsHourly.sh      # <- this line
```

5. [OPTIONAL] If you would like daily reports to be emailed, follow the same steps as #2 BUT edit EmailReportsDaily.sh and opFlowReports-daily.sh

## Troubleshooting

1. Reminder, you can always test your settings by running the shell script manually (make sure you don't have email addresses listed that should not receive test emails)

```
# test
/usr/local/opmantek/conf/EmailReportsHourly.sh

# if you are not getting any emails, check /usr/local/opmantek/logs/opFlowReports.log
```

2. Turn on DEBUG if you are having problems and check the logs again:

```
# opFlowReports-daily.sh, opFlowReports-hourly.sh, EmailReportsDaily.sh, EmailReportsHourly.sh all have
this setting
DEBUG=false # change this line to:

DEBUG=true

# now run script again and check /usr/local/opmantek/logs/opFlowReports.log
```
