Errata - 1.12_2 patch for opConfig

Unfortunately a bug occurred in the 1.12 release. This only affects customers using opConfig to import data from Open-AudIT. We have released Open-AudIT 1.12_2 with the bug fix.

If customers would like to avoid downloading and installing 1.12_2, the affected files can be replaced and main.phpm_oa_general.phpare attached to this post.

You should first rename the original files to <name>.bak, then copy the attached to:

Windows

```
c:\xampplite\open-audit\code_igniter\application\controllers\main.php
c:\xampplite\open-audit\code_igniter\application\models\m_oa_general.php
```

Linux

```
/usr/local/open-audit/code_igniter/application/controllers/main.php
/usr/local/open-audit/code_igniter/application/models/m_oa_general.php
```

Apologies for any inconvenience caused.

Files for download are below

main.php

m_oa_general.php
