

# Errata - 1.12.0 Active Directory auth failing

If you use Active Directory authentication and are using Open-Audit 1.12 it will likely be failing.

***If you do not use Active Directory authentication, this should not affect you.***

This will also only affect Active Directory validated logins to Open-Audit Enterprise (not Community).

You can confirm this by viewing the apache log. It will contain entries like the below.

```
[Thu Mar 03 09:35:29.153738 2016] [:error] [pid 32256] [client 127.0.0.1:40222] PHP Fatal error: Call to undefined method M_userlogin::clean_sql() in /usr/local/open-audit/code_igniter/application/models/m_userlogin.php on line 47
```

To fix this issue (before we release 1.12.2) you can edit the file:

Linux - /usr/local/open-audit/code\_igniter/application/models/m\_userlogin.php

Windows - c:\xampplite\open-audit\code\_igniter\application\models\m\_userlogin.php

You need to remove the clean\_sql function, so please replace line 47 with the below.

```
$sql = '/* M_userlogin::validate_user */ ' . $sql;
```

And please replace line 126 with the below.

```
$sql = '/* M_userlogin::get_user_details */ ' . $sql;
```

This bug has already been fixed for our next release. Apologies for any inconvenience caused.
