## Introduction

This endpoint enables you to add the connections that are part of your network infrastructure, it allows you to customize a variety of attributes, specify where this connection is located and the organization that it belongs.

## Creating a Connection

A connection can be created using the web interface if a user has a role that contains the connection::create permission. Go to menu: Manage -> Connections -> Create Connection. Also can be created from the Connection View, using the "Create" button.

The image shows two screenshots of the Open-AuditIT Enterprise 3.3.0 web interface. The top screenshot displays the 'Manage' menu with 'Connections' highlighted, and a sub-menu showing 'Create Connections' as an option. The bottom screenshot shows the 'Create Connection' form, which includes fields for Name, Org ID, Description, Provider, Service Type, Product Name, Service Identifier, Speed, Location ID A, System ID A, Line Number A, IP Address External A, IP Address Internal A, Location ID B, System ID B, Line Number B, IP Address External B, and IP Address Internal B. A 'Submit' button is at the bottom of the form.

# View Connection Details

Go to menu: Manage-> Connections -> List Connections.

You will see a list of connections. You can view a connection by clicking on the blue view icon. You can also edit or delete the connection.

# Database Schema

The database schema can be found in the application if the user has database::read permission by going to menu: Admin -> Database -> List Tables, then clicking on the details button for the table.

# API / Web Access

You can access the collection using the normal Open-Audit JSON based API. Just like any other collection. Please see [The Open-Audit API documentation](#) for further details.
