

Release Notes for Open-Audit v2.0.2

Released 2017-07-13.

Mostly polish and a few bug fixes for 2.0.1.

NOTE - As we now have new reports and a collection called discoveries, any tasks that exist from pre v2 will need to be edited and associated with a new discovery (which needs to be created) or the correct report.

Open-Audit	Improvement	Add warning on logon template if DB requires upgrading.
Open-Audit	Improvement	Force all 'access' logs to use level 7.
Open-Audit	New Feature	Added a function to compare the SQL in the database with the SQL file. /test/db_compare
Open-Audit	Improvement	Insert missing connections::description for consistency with other collections.
Open-Audit	Improvement	Add a 'type' column to the configuration table. Use that type for input fields on the configuration::read template.
Open-Audit	New Feature	Provide option in audit_windows and audit_linux scripts to ignore SSL errors (eg - self signed certs).
Open-Audit	Bug	Enable Google maps API regardless of protocol (http or https).
Open-Audit	Improvement	Set the default for discoveries::complete to 'y' instead of 'n'.
Open-Audit	New Feature	Include OS Name and Version in software result section of audit scripts.
Open-Audit	Bug	Allow for subnet ranges in discovery creation and updates.
Open-Audit	New Feature	Enable search on summaries, groups and devices collection pages.
Open-Audit	Bug	Make Fields display on device read template.
Open-Audit	Bug	Small bugfix to display the correct link to a VM and display the actual image for \$icon, not the wording.
Open-Audit	Bug	Fix a bug when processing a VM to match it to a row in the VM table and include the name when populating.
Open-Audit	Bug	Fix log file names on support page.
Open-Audit Professional	Bug	Fix device export clearing attributes.
Open-Audit Professional	Bug	On script read template, allow for an empty files collection.
Open-Audit Professional	Improvement	On collection template, do now allow delete for default scripts.
