Release Notes for Open-AudIT v2.2.2

Released 2018-05-28.

Change Log

Open-AudIT	Bug	Escape HTML codes when *exporting* to html.
Open-AudIT Enterprise	Bug	Show only 'current' items on device details unless as_at is set by the user.
Open-AudIT	Improvement	Improve and make consistent logging in discover_subnet.sh
Open-AudIT	Bug	Fix audit Linux script to use cURL to prevent trimming data. Visible in netstat ports being a single entry.
Open-AudIT Enterprise	Improvement	Provide the associated list of devices that match the application when reading a specific application.
Open-AudIT Enterprise	Bug	Fix Collector creation.
Open-AudIT	Improvement	Improve CSRF implementation. Add new configuration items as per Cross Site Request Forgery (CSRF) implementation
Open-AudIT	Improvement	New config option for discovering SunOS using sudo.
Open-AudIT	Improvement	Obey config for auditing linux and not using sudo with discovery running dmidecode command.
Open-AudIT	Improvement	Revise log text for devices found to enable easier (human readable) sorting.
Open-AudIT Enterprise	Bug	Fix bug when attempting to POST to OAC with bad variable names (credentials.username for example).
Open-AudIT Enterprise	Bug	Fix issue when deleting incorrect attribute when running Collector Discovery (tested for 'other' should have tested for 'credentials').
Open-AudIT Enterprise	Improvement	Improved RSS use detection. May not be used if sidebar not enabled or we have no devices and show the splash.
Open-AudIT Enterprise	Bug	Fix Windows installer to not overwrite config on upgrade.
Open-AudIT Enterprise	Bug	Fix export device to display.
Open-AudIT Enterprise	Improvement	All create forms now request a single JSON from OAC, then use it for display.
Open-AudIT Enterprise	Improvement	Remove credentials hash from XML output.
Open-AudIT Enterprise	Bug	Fix Devices Not Seen Report.
Open-AudIT Enterprise	Bug	Fix individual policy create when no policies section in JSON.
