

Home

Open-Audit is a discovery, audit and asset tracking and reporting system.

Open-Audit tells you exactly what is on your network, how it is configured and when it changes. Open-Audit is designed to be run on a server (Windows or Linux) and to scan your networks for devices. Once a device is found, Open-Audit runs a series of commands upon it and stores the resulting data in a database. This data is then available for various reporting purposes. Open-Audit comes with a list of over 50 reports with any number of additional reports able to be created by the user.

- [Errata](#)

Getting Started

Download

Open-Audit is available as a stand-alone [download](#) or part of the Opmantek [virtual appliance](#).

View the product page on [Opmantek.com](#).

- [Support Info](#)
- [Debugging](#)

Install

- [How To Install or Upgrade Open-Audit \(Windows\)](#)
- [How To Install or Upgrade Open-Audit \(Linux\)](#)
- [Installing on Oracle Linux 7.6](#)

- [Installing awscli package on RedHat 7](#)
- [Installing Open-Audit 5.x on Redhat 8 without external repo's](#)

Basic Setup

- [Getting Started](#)
- [Opmantek Virtual Machine: Installation and Getting Started](#)
- [Activating Your Free License](#)
- [Open-Audit Configuration](#)

Open-Audit Information

More information about [Opmantek](#) and our products and services available on our [website](#).

- [What is Open-Audit](#)
- [Introduction to Open-Audit Community](#)
- [Introduction to Open-Audit Professional & Enterprise](#)
- [Open-Audit Community versus Professional & Enterprise](#)

Key Documentation

These detailed guides, webinars, and blogs break down configuring Open-Audit into manageable tasks and sub-tasks.

Discover

Getting device information into Open-Audit.

How-To
