

Errata - 2.3.1 OSX Auditing

There is a bug to do with setting the Mac model (then posting it in the database). You can make the below modifications, or use the file attached.

Edit the file -

Windows - c:\xampplite\open-audit\code_igniter\application\models\m_device.php

Linux - /usr/local/open-audit/code_igniter/application/models/m_device.php

Change line 1107 from:

```
$data[] = $value;
```

to

```
$data[] = (string)$value;
```

You should also change line 1335 from:

```
$data[] = $field->value;
```

to

```
$data[] = (string)$field->value;
```

I have attached the revised file if you simply want to replace it.

Apologies for any inconvenience.

Mark.
