Errata - 2.3.0 upgrades

If you **upgraded to** 2.3.0 from a previous release, you will be missing a database column.

This applies **only** if you ran the 2.3.0 installer/upgrader package. This was fixed for 2.3.1 and subsequent releases.

2.3.0 was a preview release and not generally available.

To fix the issue run the below.

```
mysql -u openaudit -popenauditpassword openaudit -e "ALTER TABLE queue ADD pid int(10) unsigned NOT NULL
DEFAULT '0' AFTER type;"
```

And you may need the below as well.

```
mysql -u openaudit -popenauditpassword openaudit -e "ALTER TABLE queue ADD status varchar(20) NOT NULL DEFAULT
'' AFTER pid;"
```
