

Errata - 3.0.0 Windows Audits from Discovery on Windows Open-Audit Server

We have discovered a bug when trying to run a discovery, then audit from a Windows installed Open-Audit server.

To fix this issue, edit the file `c:\xampp\open-audit\code_igniter\application\controllers\include_input_discoveries.php`

Change lines 1156 & 1158 from:

```
$command_string = "%comspec% /c start /b cscript //nologo " . "$filepath\\" . $source_name . "
strcomputer=".$device->ip." submit_online=y create_file=n struser=".$domain.$username."
strpass=".$credentials_windows->credentials->password." url=".$discovery->network_address."index.php/input
/devices debugging=3 system_id=".$device->id." last_seen_by=audit_wmi discovery_id=".$discovery->id;

$log->command = "%comspec% /c start /b cscript //nologo " . "$filepath\\" . $source_name . "
strcomputer=".$device->ip." submit_online=y create_file=n struser=".$domain.$username." strpass=*****
url=".$discovery->network_address."index.php/input/devices debugging=3 system_id=".$device->id."
last_seen_by=audit_wmi discovery_id=".$discovery->id;
```

to

```
$command_string = "%comspec% /c start /b cscript //nologo " . "$filepath\\scripts\\" .
$source_name . " strcomputer=".$device->ip." submit_online=y create_file=n struser=".$domain.$username."
strpass=".$credentials_windows->credentials->password." url=".$discovery->network_address."index.php/input
/devices debugging=3 system_id=".$device->id." last_seen_by=audit_wmi discovery_id=".$discovery->id;

$log->command = "%comspec% /c start /b cscript //nologo " . "$filepath\\scripts\\" .
$source_name . " strcomputer=".$device->ip." submit_online=y create_file=n struser=".$domain.$username."
strpass=***** url=".$discovery->network_address."index.php/input/devices debugging=3 system_id=".$device->id."
last_seen_by=audit_wmi discovery_id=".$discovery->id;
```

This patch will be included in the soon to be released Open-Audit 3.0.1.

Apologies for any inconvenience.
