Introduction to Open-AudIT Professional & Enterprise

Open-AudIT consists of three main products. Open-AudIT Community is the free and open source package. Open-AudIT Professional & Enterprise are commercial software that is developed and owned by Opmantek. Open-AudIT Professional & Enterprise are distributed under the regular Opmantek software license agreement. Professional and Enterprise share the same codebase with features being enabled depending on the license installed.

The goal of Open-AudIT Professional & Enterprise is to leverage the existing information provided by Open-AudIT Community and make it available in ways Open-AudIT Community does not. The initial feature set includes a graphical dashboard, a Google map of locations and devices, time-based reporting and the ability to schedule discovery runs and report emailing.

Enterprise further has features of Baselines, Files and Role Based Access Control.

Further features have been planned and are being developed. Please contact Opmantek to enquire about becoming a supporter and having a large say in how the product is developed going forward.
