Release Notes for Open-AudIT v1.0.5

This version is a minor code fix for 1.0.4.

The only feature addition is the config item "distinct_groups". If this is set to "y" (the default) on the main page, the listing of Groups will be split by group category (type of Group). If set to "n" it will display the Group list in the traditional way (all Groups together with the exception of Network Groups).
