

Release Notes for Open-Audit v1.1

Open-Audit

Added a Group Definition for Apple OSX computers.

Corrected some Group Definition -> Group Category items.

Changed icon for Group Computers.

Open-Audit Enterprise

Improved and simplified graph data retrieval and display (less than 30 systems in the database will not adversely affect graph generation).

Added Historical Reporting feature. A report (on a per device basis) can be run which enables users of OAE to see everything that has ever been added and/or removed including when it was detected and when it was no longer detected. The current attribute types are Netstat Ports and Software. Services/Daemons will be included in a future release.

The screenshot shows the Open-Audit Enterprise 1.1 web interface. The browser address bar displays `192.168.0.20/omk/oea/system_summary/126/netstat`. The interface has a top navigation bar with 'Open-Audit Enterprise 1.1', 'Modules', 'Views', 'System', and 'History'. A dropdown menu is open under 'History', showing 'System Summary', 'Netstat listening ports' (selected), and 'Software'. The main content area is titled 'NetStat History' and displays system information for a host named 'mark'.

System Information:

- Hostname: mark
- IP Address: 192.168.0.008
- Environment: production
- Status: production
- Description:
- OS Group: Linux
- OS Family: LinuxMint
- OS Name: Linux Mint 15 Olivia
- Class: Desktop
- Form Factor: Desktop
- Manufacturer: System manufacturer
- Model: P5K SE
- Serial: System Serial Number
- Most Recent Audit: 2013-11-28
- Location Name: Marks House

Below the system information is a table showing NetStat History. The table has columns: Protocol, IP Address, Port, Program, First Seen, Last Seen, Originally Installed, and Currently Installed. The table shows 100 entries.

Protocol	IP Address	Port	Program	First Seen	Last Seen	Originally Installed	Currently Installed
