

opCharts 4.0.13 Release Notes

IN PROGRESS

March 19th, 2020

Features

- Added to opcharts-cli new options to clear and update dependencies between nodes:
 - update-subnet-dependency
 - clear-all-node-depend
- Upgrade Cytoscape and Qtip in Opmantek maps.
- Display when a node has SNMP disabled. A node has SNMP disabled when collect is disabled.
- **Export node list:** Add a help button that indicates the configuration item to modify the exported node fields.
- Added new formatter for display Megabits in remote data widget table.

Bug Fixes

- Fixed RBAC features:
 - If the inventory is enabled, the RBAC user should have full access to all the inventory objects available for the permitted nodes by group.
 - RBAC user cannot search for a group not assigned.
 - Hide "View in network map" nodes as this link creates a new map and RBAC user is not allowed to create.
 - Fixed error when assign RBAC permissions in Charts.
 - Fixed RBC permissions with maps.
 - User with RBAC permissions over a group node was not able to see its interfaces.
- API for nodes not paging if the pagination parameter is not defined in the params.
- Fixed custom group query, that prevent query the node data properly to aggregate health and response time.
- Node selector in monitored services was not working properly.
- Some graph types were not being visualised.
- Chart dataset modal window was closable with unsaved changes.
