Errata - 3.3.0 Database table view access in Community

We have been advised of a bug when clicking the database table to view under menu Admin Database List Tables.

A work-around is to view the database table details in Professional or Enterprise.

A patch is below. Edit file open-audit/code_igniter/application/controllers/include_read.php. Lines 51 and 52 are as below

```
    }
        $this->response->dictionary = $this->{'m_'.$this->response->meta->collection}->dictionary();
```

They should be

```
    } else {
        $this->response->dictionary = $this->{'m_'.$this->response->meta->collection}->dictionary();
    }
```

A patched file can also be found on github at https://github.com/Opmantek/open-audit/blob/master/code_igniter/application/controllers/include_read.php

Apologies for any inconvenience.
