Scheduling a Discovery

Once you have created a discovery within you have the ability in Open-Audit Professional or Enterprise to schedule this to reoccur as you like.

Go to menu Discover Discoveries Schedule Discoveries

The task type will already be selected for you, just provide a name for the task, choose which discovery you would like to execute, and select when you would like it executed. The fields for timing match those used by cron ([wikipedia link](#)).

For more information on scheduling different items, see [How to Schedule Tasks in Open-Audit](#).
