

What is opConfig?

What is opConfig?

opConfig improves visibility and maintains consistency across your IT environment using opConfig to capture, track, push and rollback configuration changes for any network connected device or cloud application.

What does opConfig do?

opConfig can automate everything from config push to alerting on changes and enforcing compliance. opConfig introduces operational delegation to your organization and allow the troubleshooting of your network devices without giving 'root' access. It gives you the ability to create robust command sets that can aid in root cause analysis of faults. opConfig collects and backs-up configuration information in all environments, all vendors hardware and software, cloud-based, on-premise and hybrid. Finally, with opConfig you can Implement your compliance policy with PCI-DSS, HIPPA, COBIT and more using prebuilt industry standard rule sets (eg Cisco-NSA) or customize your own.
