- Detailed NMIS9 Configuration

NMIS Configuration

This page contains several sections for both NMIS8 and NMIS9.

We have detailed a set of commonly configured attributes that most users will want to consider.

We also have a very detailed list of every option available that most users will not need to use, unless they have a specific use-case.

The NMIS8 configuration items are stored in a *text* file /usr/local/nmis8/conf/Config.nmis.

The NMIS9 configuration items are stored in a *text* file /usr/local/nmis9/conf/Config.nmis.

Common Settings to Consider Adjusting for NMIS8

Below are settings customers commonly change, typically authentication and email settings.

Authentication

auth_cookie_flavour	aut_h_cook_ie_flavour	nmis	n m is , o mk	User Management in NMIS8	To configure NMIS to share authentication cookies with Opmantek Applications, it is necessary that you change the configuration item auth_cookie_flavour from the default "nmis" to "omk" and set the configuration item auth_web_key to the same value as the OMK application's first omkd_secrets configuration.
auth_default_grous	aut_h_default_grous		As above		When accessing NMIS, you have a choice on how to handle authenticated users who do not have authorisations defined, you can reject them, or you can allow them default access. This is so that you do not have to define every user in the system if the authentication system is providing a reduced list of users, to have the users become an operator or guest by default and be able to see all groups of devices, the following would apply. 'auth_default_privilege' => 'guest', 'auth_default_groups' => 'all'. To prevent default authorisation, simply define them as blank, which is the default in the NMIS8 Install configuration.
auth_default_privilege	aut_h_default_privilege		As above		As above for auth_default_groups
auth_ldap_context	aut_h_lda_p_context	ou=people,dc=opmantek,dc=com	As above		The base of context to attempt to bind to
auth_ldap_server	aut_h_lda_p_server	192.168.1.5	<i>p</i>	As above	The LDAP server to use for authentication.

a ut h e nt ic at ion	aut h_ met ho d_1	htpas swd		As abo ve	In the NMIS configuration you can configure multiple methods which are used for auth failure, so if ms-ldap fails, it will fail back to htpasswd for example. This means if you set auth_method_1 to be ldap and auth_method_2 to be htpasswd, and login with the default NMIS credentials (and you have not changed the password), the authentication for LDAP will fail, and then authentication with the users.dat will succeed and the user will be logged in.
a ut h e nt ic at ion	aut h_ met ho d_2			As abo ve	As above for auth_method_1
a ut h e nt ic at ion	aut h_ ms _ld ap _b ase	dc=c orp, dc=o pman tek, dc=c om		As abo ve	The LDAP Base to search from
a ut h e nt ic at ion	aut h_ ms _ld ap _d n_ acc	nmis		As abo ve	The DomainName\account to bind with
a ut h e nt ic at ion	aut h_ ms _ld ap _d n_ psw	XXX XXX XXX		As abo ve	The password for the above
a ut h e nt ic at ion	aut h_ ms _ld ap _se rver	192.1 68.1.5	<i p>	As abo ve	The Active Directory server to use for authentication
a ut h e nt ic at ion	aut h_s so_ do main			As abo ve	
a ut h e nt ic at ion	aut h_ use _n am e_r eg ex	\w \- \@\\\" +	< r e g e x>	As abo ve	

Email

email	mail_combine	true	true, false	NMIS8 Email

Globals

globals	node_name_rule				
globals	threshold_falling_reset_dampening				
globals	threshold_rising_reset_dampening				
globals	uuid_add_with_node			Using Unique Identifiers (UUID) for NMIS Nodes	

System

s y st em	demote_faulty_nodes	true	tr u e, fa lse		For nodes that have been non-collectable for a long time NMIS offers to attempt collect operations only once every 24 hours.
s y st em	display_status_summary	false	tr u e, fa lse	NMIS Node Status	
s y st em	fastping_interval				Added in NMIS 9.0.3
s y st em	fastping_target_interval				Added in NMIS 9.0.3
s y st em	graph_cache_maxage				
s y st em	nettype_list	wan,lan,vpn,man,san,voice,default	< d is t>		
s y st em	network_viewNode_field_list	status,outage,sysName,host_addr,host_addr_backup,group,customer,location,businessService,serviceStatus,nodeType,nodeModel,polling_policy,sysUpTime,sysLocation,sysContact,sysDescr,ifNumber,lastUpdate,nodeVendor,sysObjectName,roleType,netType	< d is t>	Adding or Rearranging fields in the Node Details View	Controls which fields are shown in the Node View and in what order.
s y st em	node_status_uses_status_summary	false	tr u e, fa lse	NMIS Node Status	
s y st em	non_stateful_events	Node Configuration Change, Node Reset, NMIS runtime exceeded	< d is t>		
s y st em	os_username				

system	polling_interval_factor	0.9	<deci m al>		Fraction of the polling interval after which node is considered for next poll
system	threshold_period-interface	-15 minutes			Added in NMIS 8.5
system	threshold_period-pkts	-15 minutes			Added in NMIS 8.5
system	threshold_period-pkts_hc	-15 minutes			Added in NMIS 8.5

Detailed NMIS8 Configuration

Below are detailed options for NMIS8 configuration.

Configuration settings in the Config.nmis file are broken into sections.

Section	Name	Original Value	Possible Values	Description
authentication	auth_banner_title	NMIS8		
authentication	auth_buttons_visible	true	true, false	
authentication	auth_cookie_flavour	nmis, omk		
authentication	auth_cw_comp any_id			
authentication	auth_cw_private_key			
authentication	auth_cw_public_key			
authentication	auth_cw_server			
authentication	auth_debug			
authentication	auth_debug_re mote_addr			
authentication	auth_default_gr oups			
authentication	auth_default_pr ivilege			
authentication	auth_expire	\+30min		
authentication	auth_htpasswd _encrypt	crypt		
authentication	auth_htpasswd _file	<nmis_conf>/users.dat		
authentication	auth_ldap_attr			
authentication	auth_ldap_cont ext	ou=people,dc=opmantek,dc=com		
authentication	auth_ldap_serv er	192.168.1.5		
authentication	auth_ldaps_serv er			

authentication	auth_lockout_after	0			
authentication	auth_login_motp	Authentication required: Please log in with your appropriate username and password in order to gain access to this system			
authentication	auth_login_title	NMIS8 login			
authentication	auth_method_1	htpasswd			
authentication	auth_method_2				
authentication	auth_method_3				
authentication	auth_ms_ldap_attr	sAMAccountName			
authentication	auth_ms_ldap_base	dc=corp,dc=opmantek,dc=com			
authentication	auth_ms_ldap_debug	false	true, false		
authentication	auth_ms_ldap_dn_acc	nmis			
authentication	auth_ms_ldap_dn_psw	XXXXXXXXXX			
authentication	auth_ms_ldap_server	192.168.1.5			
authentication	auth_ms_ldaps_server				
authentication	auth_radius_secret				
authentication	auth_radius_server				
authentication	auth_sso_domain				
authentication	auth_user_name_regex	[w\.\.\@\``]+	<regex>	Deprecated
