What is opTrend?

Opmantek's opTrend module is designed to proactively manage network resources and visually analyze key performance metrics. With opTrend you can monitor gradual increases in traffic and data usage to identify where issues and resource exhaustion are likely to occur and when. opTrend's intelligent trending engine can automatically baseline key performance metrics and highlight resources with exceptions. It can also identify and highlight key resources that are performing at a high level.

Getting Started - opTrend Installation and Configuration

Download

View the opEvents product page on [Opmantek.com](https://opmantek.com).
