

Release Notes for Open-Audit v4.2.0

Released 2021-08-17

Linux SHA256 - 713aa337d9abdb9ca3e9198ae25f2a301bc33eb1b7089dcfd58b083d6bec5819

Linux MD5 - d487408747f8b490238bbbaef82f3849

Great new feature for this release - [Integrations](#). We initially ship with an NMIS integration, but going forward this can be expanded to integrate with any third party system to import, export and sync devices.

NOTE - If you are currently using the NMIS Integration feature, any entries for this will be removed. DON'T PANIC! We are providing a default integration that should seamlessly take over and 'just work'. You should review the integration once you have upgraded and if necessary, configure to your liking.

Integrations are **very** configurable. Some might say **too** configurable. For this reason, when you create a new Integration, most of the fields are hidden behind the Advanced button. For more info, see the [Integrations](#) page.

NOTE - Redhat 8 users will need to edit the Integration and add credentials. Integrations will not work locally for Redhat 8 at this time (without credentials). We are aiming to address this ASAP. Add credentials, problem solved. Apologies for the inconvenience.

Version	Type	Collection	Description
All	New Feature	Integrations	As above. Create an associated default discovery for the default integration.
All	New Feature	Discoveries	Default Discovery added for server local subnet.
All	New Feature	Rules	Add a rule for any discovered devices with an SNMP OID, set the manage in NMIS attribute to yes.
All	Improvement	Discoveries	Delete any associated tasks when deleting a discovery.
All	Improvement	Discoveries	Fix for systemd services in audit linux script.
All	Improvement	Scripts	Fix the audit_windows script to correctly parse bad output as per openaudit 4.1.2 run vbs Microsoft VBScript runtime error: array index out of range:[number: 1]
Professional	Improvement	Welcome	On the /omk Welcome page, show only Open-Audit for a name, regardless of the licensed version.
Professional	Improvement	Devices	Refine devices read template with improved links for NMIS items.
Professional	Improvement	Devices	Refine devices read template with drop downs for some NMIS attributes.
All	Improvement	Discoveries	Add SNMP helper for Vyatta.
