

# Errata - 4.2.0 and earlier Javascript vulnerability

## Javascript link creation vulnerability

Last revised: 2021-11-01

### Summary

Unfortunately there is an issue with link creation in the GUI with Open-Audit Community.

If a bad value is passed to the routine via a URL, javascript code can be executed.

This requires the user be logged in to Open-Audit Community to trigger.

### Severity: Medium

The conditions of successful exploitation are that the user clicking the bad URL be logged in to Open-Audit Community.

### Products Affected

Open-Audit Community all versions.

### Available Updates

A patch for the issue described in this bulletin will be available in the next released Open-Audit v4.3.0.

### Workarounds and Mitigations

Download the attached file and replace the following file:

Linux - /usr/local/open-audit/code\_igniter/application/helpers/output\_helper.php

Windows - c:\xampp\open-audit\code\_igniter\application\helpers\output\_helper.php

The file is also available on Github at [https://raw.githubusercontent.com/Opmantek/open-audit/master/code\\_igniter/application/helpers/output\\_helper.php](https://raw.githubusercontent.com/Opmantek/open-audit/master/code_igniter/application/helpers/output_helper.php)
