Release Notes for Open-AudIT v4.3.1

Released 2021-12-22

Linux SHA256 - 8fca2a68ed2dd7fa791738931e6651d6383377f671ff493d5a31cab77f65251b

Linux MD5 - 45913fa140a22bdb6613c873007569c5

Open-AudIT 4.3.1 is a minor patch release, however with 4.3.0 not being released for Windows, a larger release for that platform when upgrading from 4.2.0.

There is one critical bug fixed - scheduled tasks running every minute. This is a result of security hardening and a simple test passing when it shouldn't. No security issue in any way, just us being as thorough as possible - sometimes too much!

Version	Type	Collection	Description
Community	Improve	Discoveries	Add Mariner Linux audit ability in audit_linux.sh.
Community	Improve	Discoveries	Add Fortigate 60F to SNMP Model helper.
Community	Bug	Discoveries	Ensure we use a padded IP in the discovery log match / update so matching on IP now works again.
Enterprise	Improve	Discoveries	Improve discovery logs being processed from Collector.
Professional	Bug	Discoveries	Ensure we don't inject html and then try to escape it on discoveries read template (in the log section).
Professional	Improve	Discoveries	Ensure discoveries_collection template is w3c validated.
Professional	Bug	Database	Fix deleting rows from the database (usually devices with status Deleted) in menu Admin Database List Tables.
Professional	Bug	Tasks	Fix bug when testing if a task should run (all tasks would always run).
