

Release Notes for Open-Audit v4.3.3

Released 2022-05-17

Linux SHA256 - 56d9f47c124f172266d0ac3f69d555ed6c6cca0c5be79b8bd0ba92adf6c0cb7b

Linux MD5 - b7baa0db5863033d40f95bc772cb94d2

NOTE - Errata page to fix some trivial bad links in Community on the Summaries Collection template - [Errata - 4.3.3 Bad Links on Collections Summary template](#)

Open-Audit 4.3.3 is a maintenance release.

Version	Type	Collection	Description
Enterprise	Improvement	Clouds	When querying AWS for virtual machines, if there is no public IP, fallback to the private IP for the device's system.ip field.
Professional	Improvement	Discoveries	Do not throw a console warning when calling util/queue (warning because that endpoint does not produce output).
Professional	Improvement	Devices	Show disk size in GB, not MB.
Professional	Improvement	Tasks	Run a scheduled task as the user that created (or last edited) that task. Affects items such as reports and queries. We should only return those devices the user running the task should see, not all devices which we would see if the Open-Audit Enterprise user was used.
Enterprise	Improvement	Roles	Add rack_devices permission to Roles Read template.
Professional	Improvement	Devices	Rename <i>Insert</i> to <i>Import</i> on the button on the Import Example Devices page to be consistent with menu items.
Professional	Improvement	Devices	Apply a sort to device details template for drives and volumes tables.
Enterprise	Improvement	code	Add some config items to install/opCommon.json for collector timeouts - oae_collector_connect_timeout, oae_collector_request_timeout, oae_collector_inactivity_timeout
Professional	Bug	code	Allow for self signed certs when using HTTPS or LDAPS in underlying framework upgrade.
Professional	Bug	Licenses	Related to the above, license creation and retrieval (because this uses HTTPS) is now fixed.
Community	Bug	LDAP Servers	Related to the above, do not fail by not validating self-signed LDAPS certificates.
Community	Bug	LDAP Servers	Fix false positive error when deleting an LDAP Server. The LDAP Server is deleted, but we were throwing a warning when there was no need to.
Community	Improvement	Summaries	Show all collections on the Summaries collection template.
Community	Improvement	Summaries	Only count the correct Org permitted collections in m_summaries (ie, do not show ALL items for a given collection, only those items a user has the OrgID permission to view.
Community	Improvement	Discoveries	Add Windows 11 to audit script.
Community	Improvement	Discoveries	Merge pull request #12 from FranzXaver/master: Added PostgreSQL, Tomcat, MariaDB to server_item, dmidecode hardening
Community	Improvement	Discoveries	Merge pull request #4 from FranzXaver/FranzXaver-patch-2: Better oid2name detection for postgres and centos
Community	Improvement	Discoveries	Merge pull request #3 from FranzXaver/FranzXaver-patch-2: Ignore binary files when grepping for datadir
Community	Improvement	Discoveries	Add some new Mac Models to mac_model_helper.
Community	Improvement	Discoveries	Fix disk, memory, network cards, CPU in audit_osx for M1.
Community	Improvement	Discoveries	Updates to Fortigate device type setting in SNMP Model Helper.
Community	Improvement	Discoveries	Add warning on discoveries collection, create and read templates if Nmap SUID not set.
