Release Notes for Open-AudIT v1.6.2

Released 2015-03-19

Open-AudIT Enterprise - Bug Fix - Fixed a syntax error causing report fail for new installs on the "Enterprise - Devices not seen for days" report.

Open-AudIT - Improve - All view files reviewed for potential javascript injection. All output escaped using "htmlentities" PHP function.

Open-AudIT - Improve - Tweaked the display code to group network cards by index, then connection id.

Open-AudIT - Bug Fix - ESXi now correctly reports installed memory instead of max memory.

Open-AudIT - Bug Fix - Auditing linux now allows for package details on RedHat based systems to report including a ampersand (&) in the URL and doesn't generate an "invalid XML" error upon submission to Open-AudIT.
