

Release Notes for Open-Audit v4.4.1

Released 2023-01-18

Linux SHA256 - 60af4a379cb5f2cabf27c4043f36aa10101885f20de631136e30798bcd6af74d

Linux MD5 - 0196a89374770da883c7add06ef173fe

Linux only release.

Errata - If your discoveries are failing when encountering a 'computer' (anything that responds with an OID containing 8072), then delete the file `/usr/local/open-audit/code_igniter/application/helpers/snmp_8072_helper.php`. We have uploaded a release with this fix, but it may not have propagated to the file cache(s) just yet.

This is a very minor bug-fix release.

Version	Type	Collection	Description
Professional	Bug	Discoveries and Credentials	If the links on the Welcome Dashboard to "Discover My Network" or in menu Help Discovery Wizard were clicked, the page displayed but did not display the guided wizard modal.
Community	Bug	Attributes	Attributes were not included in Org access testing in the response helper. Subsequently, a user without access to Org #1 (the Default Organisation) could not view devices.
Professional	Bug	Integrations	Fix device display for users with no OrgID #1 access. It was failing because no integrations are retrieved, hence no Opmantek attributes were populated for select boxes.
Professional	Bug	Configuration	Restore the Test Email button and function to the email settings page.
